

Versus®

La Révolution Versus

THE FIRST MULTISIDED LOCK FOR SLIDING DOORS AND WINDOWS

The **VERSUS** concept consists in allying a universal lock block with a variety of front faces and handles.

This creative space gives you a free rein to express yourself through equipment for sliding doors and windows.

VERSUS lets you combine comfort, security, aesthetics, ergonomics and attractive color schemes. The patented system for locking the service core—“**Takotak**”—combines rapid mounting in the workshop with simplicity of installation on site: the front face clips on, and the handles screw onto the lock block.

Traditional machining authorizes easy adaptation to current formed plastics and even allows for renovation of existing door- and window-frames to be carried out on site.

At last : safe handling

With this safe, functional handle with a real, key-operated lock, the exterior sash can be secured.
The PEC is compatible with interior Versus handles.

IMPLEMENTATION ON UNIVERSAL LOCK BLOCK

- Exterior locking handle made from injected alloy,
- Powdered thermo-lacquering, identical to laquered aluminium profile,
- European half-cylinder (optional: crack open or tilt open),
- Standard machining of aluminium profile,
- Screws onto the universal lock block from the inside (patented system),
- Can operate a Versus 2-and-3-point closer.

PEACE OF MIND.

With this locking handle, you can leave home through the enclosed porch.

A LARGE SELECTION OF RAL COLORS

Color coordinate your desires.

The universal system for attaching the handles to the lock block means that handles and front faces are interchangeable—always.
